

The Segment: 21-35 Digital Natives- Voice-Ready, Voice-Stalled

67-70M out of 100M Indian ChatGPT users speak Hinglish everywhere – except on ChatGPT

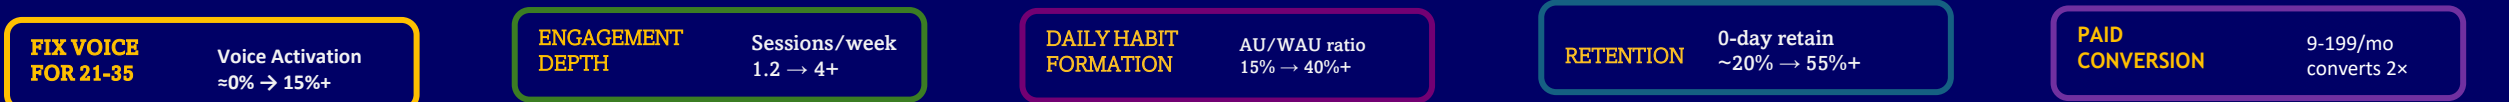

Segment Scoring Matrix

Segment	Size (M)	Voice Gap	Delta (M)	LTV	Kill Reason
College (18-24)	44-46	65-75%	29-35	Low	Subsumed in 21-35
Early Careers (21-28)	40-50	55-70%	22-35	Medium	Subsumed into 21-35
Young Pros (25-35)	150-180	40-55%	60-99	High	Merged into 21-35
Creators(22-35)	10-15	45-55%	4.5-8	High	Niche
Kirana/SMB(30-50)	40-50	45-55%	18-27	Low	Low literacy

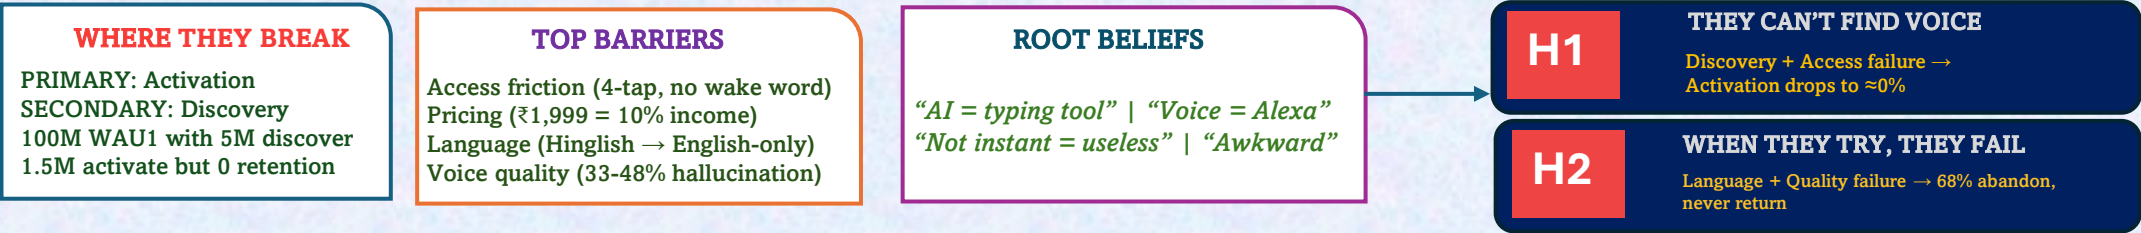

★ CHOSEN: 21-35 Digital Natives | 65-75M | 133-204M unmet delta

BUSINESS OUTCOME CHAIN

PRODUCT OUTCOME TO FIX

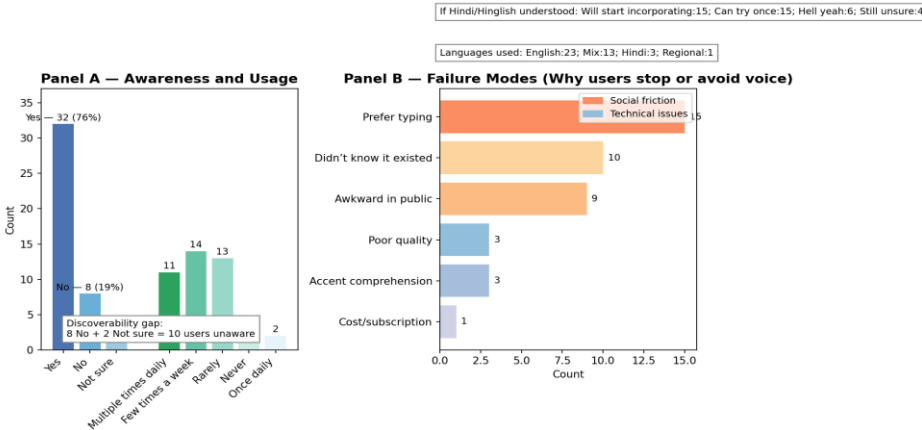

21-35 Digital Natives are voice-ready but voice-blocked. Fix discovery + fix language = unlock 133-204M users → engagement → habit → revenue.

Research Validation: Language barrier is the culprit, not discovery

Quant (n=42, 21-35 segment)+Qual (n=6 interviews). H1: Partially confirmed. H2: Strongly confirmed.

Voice Feature: Discoverability and Failure Modes

Quantitative Survey Analysis (n=42):

64% send WA voice notes regularly

vs

≈0% use ChatGPT voice regularly

76%

aware voice exists

55%

use English w/ voice (unnatural)

24%

unaware (H1 gap)

90%

would use if Hinglish worked

KEY REFRAME

"Prefer typing" is a SYMPTOM, not a cause.

Qual proves: they type because voice fails their language.

Fix H2 → this barrier collapses.

USER PERSONAS : Composed from 6 interviews and 42 surveys

PAWAN MAHESHWARI

Age: 33, Full Stack Developer from Bikaner

Notable Quote

"On WhatsApp I can be vernacular. On ChatGPT, I have to speak English and be very specific."

Behaviour

Uses ChatGPT daily for coding and fixing code
Sends WhatsApp voice notes daily with slangs and vernacular
Tried ChatGPT voice once → defaulted back to typing
Only types short prompts for code, no longer conversations

Frustrations

Spoke Marwari → ChatGPT transcribed it as Urdu or Arabic
English accent not understood, words tweaked to something else
Has to be "very specific" on GPT vs casual and free on WhatsApp

Qualitative analysis (n=6)

Regional Language Fail 6/6

Typing Default 5/6

Self-consciousness 3/6

Prompt Anxiety 3/6

H2

ALL 6 languages failed — Malayalam, Marwari, Gujarati, Haryanvi, Hindi, Garhwadi

H2

"Typing is easier" — symptom of voice failing, not a real preference

Context

Anxious about silly Qs, speaking louder, privacy in shared spaces

H1

"I get lost giving prompts" — voice doesn't feel conversational

KAMALJEET SEHRAWAT

Age 37, Professor from Chandigarh

Notable Quote

"I get lost when I have to give a prompt. It doesn't feel conversational. Typing gets the work done."

BEHAVIOUR

New to AI sphere, struggles to speak naturally to ChatGPT
Gets lost when structuring prompts — doesn't feel conversational
Finds Gemini more vernacular-friendly than ChatGPT
Typing feels more time-efficient than voice for him

FRUSTRATIONS

Spoke Haryanvi → completely wrong transcription
Couldn't understand ChatGPT's output after voice input
Voice feels like a waste of time — not efficient at all

Verdict

H1: PARTIALLY CONFIRMED

76% aware but activation ≈0%.
Prompt anxiety + access friction.

H2: STRONGLY CONFIRMED

6/6 language fail. 90% latent demand.
"Prefer typing" = H2 symptom.

Voice is broken, not unwanted. 64% send voice notes daily elsewhere. 6/6 regional languages failed on ChatGPT. 90% would switch if Hinglish worked.

WHAT IS THE PROBLEM?

65-75M users in India are voice-native — they send 7B WhatsApp voice notes daily. Yet voice activation on ChatGPT is ≈0%.

They default to typing not because they prefer it, but because ChatGPT’s voice doesn’t understand their language. They speak Hinglish (80-90%). ChatGPT voice supports English only.

68% abandon after first try. 6/6 regional languages failed in our interviews.

WHY DOES THIS PROBLEM EXIST?

Surface: Users try voice once, it fails, they never come back. 68% abandon rate.

Pattern: 36% say they “prefer typing” — but our qual proved this is a symptom, not a preference. They type because voice failed them.

Structure: English-first voice model. Zero Hinglish support. Mic buried 4-tap deep. Voice gated behind ₹1,999 Plus. 33-48% hallucination.

Beliefs: “AI is a typing tool.” “Voice is for Alexa, not work.” “Speaking to my phone feels awkward.”

WHY IS IT IMPORTANT TO SOLVE?

For users: They can finally speak Hinglish naturally to ChatGPT. Use cases: mock interviews, career prep, hands-free learning during commute. Voice = 3× engagement vs text.

For business: 133-204M unmet voice delta. 90% of our survey said they’d use voice daily if Hinglish worked. ₹99-199/mo converts 2× vs ₹399. India is OpenAI’s 2nd largest market.

Outcome chain: Fix voice → engagement depth → daily habit → retention → paid conversion → revenue.

WHO ARE WE SOLVING FOR?

- P

The Aware Typer (~60% of sample)

Working pros, 25-33. Uses ChatGPT + WA voice daily. Tried GPT voice → language failed → defaulted to typing.

“On WA I can be vernacular. On GPT I have to speak English.”
- K

The Hesitant Explorer (~40%)

Non-tech, 22-38. Prompt anxiety + regional language 100% failed. Sees voice as waste of time.

“I get lost giving prompts. It doesn’t feel conversational.”

H2: Language H1+H2: Access+Lang

WHAT VALUE DOES IT BRING?

133-204M unmet voice users unlocked

90% said they’d use voice daily if Hinglish worked (survey validated)

₹99-199/mo sweet spot, converts 2× vs ₹399 Plus. Students = viral flywheel.

India = OpenAI’s 2nd largest market. Voice is the unlock for the entire engagement flywheel.

IMPACT MAP

GOAL: Voice activation ≈0% → 15%+ for 21-35

IMPACTS:

- Users speak Hinglish naturally
- Find voice in 1 tap (not 4)
- Get accurate, context-aware responses
- Build a daily voice habit

DELIVERABLES:

- Hinglish voice model
- 1-tap mic redesign
- Free voice tier (₹0 entry)
- Onboarding nudge + tutorial
