

Onboarding Teardown of

Gumloop

"Understanding a task should be the only prerequisite to automating it."

Manav Agarwal

Next Leap PM Fellowship 2026

Founded

2023 (YC W24)

Funding

\$70.6M | Series B: \$50M

Customers

Shopify, Ramp, Instacart, Gusto

Product Overview

BUSINESS MODEL Freemium SaaS | Credit-Based Pricing

Free: 5,000 credits/mo | Pro: \$37/mo (20K credits) | Enterprise: Custom

Standard AI: 2 cr | Advanced AI (Claude/GPT-4.1): 20 cr | Enrichment: 60 cr

BYOK reduces AI node costs to just 1 credit

THREE PRODUCT PILLARS

Gumloop Agents

AI agents employees build in minutes via chat or canvas

Gumloop Platform

Visual drag-and-drop canvas for workflow orchestration

Gumstack

Enterprise security layer for all AI agent governance

Competitive Landscape

	Gumloop	Zapier	n8n	Dust	Lindy
Approach	AI-native agent builder	App-to-app + AI add-on	Dev-first workflows	Knowledge agents	AI assistant
Integrations	100+ & 50 MCP	8,000+	400+ & HTTP	Native knowledge	3,000+
Pricing	Credit: \$37/mo	Per-task: \$20/mo	Per-exec: €20/mo	\$29/user/mo	\$50/mo
Strength	Lowest barrier AI	Massive ecosystem	Self-host + code	Enterprise knowledge	Conversational
Weakness	Few integrations	AI bolted on	Steep learning curve	Limited SaaS auto.	Limited control

Target User & Personas

Priya — Growth Marketing Manager

28 yrs | B2B SaaS, Bangalore | 200 employees

TECH LEVEL

Can use Canva & Google Sheets. Cannot code. Understands what an API is but has never configured one.

PAIN POINT

Spends 3 hrs/day on manual research, lead enrichment, and summarising reports for Slack. Engineering team has a 3-week backlog — won't build marketing tools.

JOB TO BE DONE

"Automate repetitive research and data tasks without asking engineering for help."

SUCCESS LOOKS LIKE

Agent auto-enriches webinar registrants → updates HubSpot → sends Slack summary to SDR team. Saves 12 hrs/week.

James — Revenue Operations Lead

33 yrs | Fintech, London | 500 employees

TECH LEVEL

SQL, Make scenarios, reads API docs. Doesn't write production code.

PAIN POINT

Manages 15+ tools. Broken Zapier zaps cause 2-day pipeline data gaps. Spends weekends fixing fragile Make scenarios that break on API updates.

JOB TO BE DONE

"Build reliable, intelligent data pipelines that detect and self-correct problems."

SUCCESS LOOKS LIKE

AI agent monitors Salesforce daily, auto-corrects formatting, flags discrepancies to finance, generates weekly health report. Reduces data escalations by 80%.

User Journey: Signup to Setup

01 Signup

Google/Microsoft SSO only.
One click, zero forms, no
email/password.

Easy

02 Profile

First name, last name,
optional photo. No company
info asked. Progress dots
visible.

Quick

03 Attribution

"How did you hear?" Includes
ChatGPT/Claude/Perplexity as
a channel. Skip available.

Interesting

04 Role Selection

8 roles with colourful icons.
Personalises agent tools &
prompts for your function.

Smart

05 Superpowers

Pre-checked capabilities
with gamified language.
Credits shown (700/700).
Visual diagram.

Empowering

User Journey: First Value in Under 8 Minutes

06 Slack Demo

Personalised mock conversation using user's real name. Agent responds to @Gumloop with PR details + takes actions.

Impressed

07 Dashboard

"My First Agent" ready. Two clear CTAs: set trigger, create skill. Right panel shows model, apps, skills.

Oriented

08 Execution

7 tool calls → 5 TechCrunch headlines → Google Sheet created and linked. 250 credits used. Follow-ups suggested.

Amazed

09 Output

Real Google Sheet with headlines + URLs. Tangible, verifiable, useful output. Trust loop closed.

Satisfied

EMOTIONAL ARC Easy → Quick → Interesting → Smart → Empowering → Impressed → Oriented → Amazed → Satisfied

KEY INSIGHT: Time to First Value: ~5-8 min vs n8n 2+ hrs | Zapier ~15-20 min | Make ~30-60 min. Agent-first approach eliminates the blank canvas problem.

The Aha Moment

The exact moment the user shifts from trying to believing.

Three things converge at Step 8:

- Proof of Capability**
Agent scraped a live site, extracted data, created a Google Sheet, linked it. 7 tool calls, zero user effort.
- Effort-Value Asymmetry**
User typed one sentence. Agent did 10 min of work in 30 seconds. This gap creates the 'wow' feeling.
- Transparent Trust**
Shows '7 Tool Calls, 3 Messages' + credit cost. User sees HOW it worked — not a black box.

Aha Moment Comparison

	Gumloop	Zapier	n8n
Time to Aha	5-8 min	15-20 min	2+ hours
User effort	Type 1 sentence	Config trigger + action	Nodes + creds + JSON map
Output	Real Google Sheet	Confirmation message	JSON in node inspector
Feeling	"It understood me!"	"Ok, that works"	"Finally it flowed"

Key Learnings: UI/UX Design Decisions

0

Agent-First Architecture

1

Chat agent, not blank canvas. Mirrors delegation to colleagues — users talk, not program. Every competitor starts with 'create a workflow.' Gumloop starts with 'message your agent.'

0

SSO-Only Signup

2

Google/Microsoft only. Zero friction (one click), pre-connects ecosystem for smoother app integrations downstream, verified identity for enterprise sales pipeline.

0

Progressive Profiling

3

6 small single-question screens instead of one long form. Skip options on non-essentials. Multi-step forms outperform single-page forms by 86% in conversion rate.

0

Pre-Checked Superpowers

4

Default bias design pattern — all capabilities ON by default. 'Superpowers' gamification language + visual orbit diagram makes abstract capabilities feel tangible.

0

Show-Don't-Tell Demo

5

Personalised Slack mock using user's real name in a realistic enterprise use case (PR review tracking). Optional but compelling. Makes abstract 'AI agent' concept concrete.

0

Immediate Gratification

6

First task produces a real, verifiable Google Sheet with live data + transparent execution details (7 tool calls) + suggested follow-ups. Closes the trust loop completely.

Recommendations to Improve

1

HIGH

Credit Cost Preview Before Execution

Show estimated credit cost before confirming tasks — like ride-sharing fare estimates. Reduces bill shock, builds pricing trust, and helps users make informed automation decisions.

2

MEDIUM

Interactive Onboarding Checklist

Post-setup checklist with 5-6 milestones: connect 2nd app, set trigger, share agent with teammate. Progress bar. Users completing 3+ milestones retain at 2-3x higher rates.

3

MEDIUM

Role-Based Agent Templates

After role selection, show 3-4 pre-built agent templates per function. Product → 'Competitor monitor.' Sales → 'Lead enrichment.' Templates are the fastest path to value.

4

LOW-MED

Plain-English Error Recovery

When agent fails: show what went wrong in plain language, which step failed, one-click fix suggestion, credit refund confirmation. Error moments are highest-risk churn points.

5

LOW

Credit Calculator on Pricing Page

Interactive tool: input workflow types + volume → see estimated monthly cost with real examples. Removes the #1 purchase objection identified across user reviews.

Success Metrics Framework

NORTH STAR METRIC

Agent Activation Rate

% of new signups who complete at least one meaningful agent task within 48 hours

PRIMARY METRICS

<10 min

Time to First
Agent Task

>70%

Onboarding
Completion

>40%

Day 7 Agent
Retention

>5%

Free-to-Pro
Conversion

SUPPORTING METRICS

Metric	What it measures
Credits consumed in first session	Engagement depth during initial exploration
Second agent creation rate (14-day)	Whether aha moment converts to compounding adoption
Slack/Teams integration rate	Agent deployment in team channels — viral growth potential
Agent share rate (30-day)	Bottom-up adoption loop within organisations
Credit exhaustion rate	Engagement signal AND upgrade trigger
Error recovery rate	Whether debugging UX retains or churns users

Higher Activation → Higher Retention → Higher Conversion → Higher ARR + bottom-up enterprise adoption
