

AI Powered Fitness Planner

Personalized workout
and nutrition plans
tailored by AI

Presented By: **Manav Agarwal**

The Problem

Understanding the fitness challenges that SynergyFit is designed to solve.

Generic workout plans fail to account for individual fitness levels, goals, and physical limitations.

Fitness apps rarely integrate nutrition guidance, leaving users without complete wellness support.

Tracking progress across workouts and diet is fragmented, making it hard to stay motivated.

Users struggle to maintain consistency without personalized feedback and adaptive planning.

Welcome/Login: Secure entry point with social sign-in options for quick access.

Profile Setup: Input fitness goals, preferences, and health data for AI personalization.

Dashboard: Central hub displaying your personalized workout and nutrition overview.

Nutrition Plan → Progress Tracker: AI-generated meal guidance flows into visual analytics.

Welcome Screen

Introduction and login interface for new and returning users.

Profile Setup Screen

User goals and fitness preferences input for AI personalization.

Dashboard Screen

Overview of personalized workout and nutrition plans.

Nutrition Plan

Progress Tracker

These supporting screens complete the SynergyFit experience. The Nutrition Plan Screen delivers customized meal guidance aligned with fitness goals, while the Progress Tracker Screen provides visual analytics to monitor achievements and maintain motivation throughout the user's fitness journey.

Next Phase

Frontend development to build interactive UI components and responsive layouts.

Backend database architecture for secure user data and plan storage.

AI integration for dynamic workout and nutrition plan generation.

User testing and iteration to refine the experience before launch.
